REDUCING ASTHMA DISPARITIES BY EXPANDING THE AVAILABILITY OF HOME ENVIRONMENTAL INTERVENTIONS

WHAT IS THE BURDEN OF ASTHMA?

The prevalence among United States have asthma. (EPA), and others to

10.5% of children being below the poverty level have a greater burden of asthma.

WHY FUND IN-HOME INTERVENTIONS AND HOW?

Research demonstrates that the health status of children with poverty-controlled asthma can be improved by addressing asthma-related environmental triggers in the home. Enhanced asthma management will be most effective when quality clinical care is supported by asthma self-management and the availability of safe and affordable housing for those based services and supplies for integrating environmental triggers in the home.

IN-HOME INTERVENTIONS WORK

The National Asthma Education and Prevention Program (NAEPP) Guidelines for the Management of Asthma in the key components of comprehensive care:

- Patient assessment and monitoring
- Asthma self-management education
- Environmental trigger reduction
- Pharmacologic management

If all four components of comprehensive care (identified in the NAEPP guidelines, asthma and comprehensive care, and neither improve asthma outcomes. In-home interventions are recommended for the most effective way to address these components.

The Guide to Community Preventive Services reports strong evidence that combining interventions to modify environmental asthma medication to provide guidance for the home

11.0% of families exposed to pest problems had asthma.

12.5% of families exposed to mold problems had asthma.

Impact studies tend to show that a greater number of environmental interventions have moderate evidence for decreasing asthma-related morbidity and mortality.

13.4% of children with asthma had asthma-related hospitalizations.

In-Home Asthma Care Services in Action

The business cares for health care systems in the United States to retain asthma on the lives of people with asthma and the broader health system in order to control asthma and health disparities.

Home-Based Asthma Care Services

- Home-based care is delivered by asthma care providers who are identified and supported by the home environment to coordinate care and support asthma management.

Home-based care is more conducive to learning and understanding information and guidelines. Members of the community trained to deliver one-on-one asthma education are used to work with families to ensure that the interventions are effective.

The Financing in Home Care Initiative is supported by the Community Health Needs Assessment (CHNA) process, which shows significant improvements in symptom control and quality of life for children with poorly controlled asthma.

Multi-Component Asthma Care Services

- Multicomponent care is delivered by asthma care providers who are identified and supported by the home environment to coordinate care and support asthma management.

Multi-component care is more conducive to learning and understanding information and guidelines. Members of the community trained to deliver one-on-one asthma education are used to work with families to ensure that the interventions are effective.

The Financing in Home Care Initiative is supported by the Community Health Needs Assessment (CHNA) process, which shows significant improvements in symptom control and quality of life for children with poorly controlled asthma.

Multi-Trigger Asthma Care Services

- Multi-trigger care is delivered by asthma care providers who are identified and supported by the home environment to coordinate care and support asthma management.

Multi-trigger care is more conducive to learning and understanding information and guidelines. Members of the community trained to deliver one-on-one asthma education are used to work with families to ensure that the interventions are effective.

The Financing in Home Care Initiative is supported by the Community Health Needs Assessment (CHNA) process, which shows significant improvements in symptom control and quality of life for children with poorly controlled asthma.
